24 October 1988

MEMORANDUM FOR DEPUTY DIRECTOR FOR SCIENTIFIC AND TECHNICAL RESEARCH

SUBJECT: Sun Streak Operational Report - Project 8804 (U)

SG1C

1. (S/NF/SK) During the period of 15 August 1988 through 17 October 1988 inclusively, five remote viewers conducted a total of 15 sessions in an effort to describe the content of a building identified by [REDACTED] (TAB A). Remote viewers attempted to substantially describe the activities related to the content of Building Number 110.

2. (S/NF/SK) Remote Viewer 018 perceived the target area as a "secure area." The target building housed a "power network grid" (TAB B) utilized in the regulation and manipulation of electrical power associated with the concept of "forward movement."

3. (S/NF/SK) Viewer 003 perceived the target area as a complex of military related buildings dedicated to scientific "test runs" and experimentation. The target building housed an object described as "a turbine or compressor" (TAB C) replete with humming and whining noises, and used in generating an "overwhelming" amount of power. The notion of this huge power source appeared associated with high velocity, a discernible change of state of motion (a surging forward).

4. (S/NF/SK) Viewer 099 described the target building as a low, flat, structure associated with "production areas" of power engineering of jet turbine engines and aircraft thrust. See TAB D and TAB E. Viewer 099 described a concept of "fast moving test objects through the atmosphere," somewhat reminiscent of the "Scram Jet" concept. See TAB E.

5. (S/NF/SK) Viewer 095 described the "target site" as a

rectangular, grey, multi-storied, block building that is still under construction. Viewer 095 conceptually perceived the presence of "massive amounts of contained energy progressively gathered in ever increasing amounts." According to 095, the energy is packaged, pulsed, and external to a structure; it is "used to drive something."

6. (S/NF/SK) Viewer 079 indicated that Target [redacted] is located west southwest of Moscow in the vicinity of Bugulma and Blagoveschensk of the Soviet Union. See TAB F. The target building is part of a complex utilized to modernize the "symmetry and designs" of what appears to be the Soviet "Blackjack" bomber. Upgrades are mainly SIGINT related; electro-optics, telemetry, radar and radar-jamming are related to this scientific effort. The concept of the Blackjack's suitability as a low-level, strategic intelligence gathering platform is associated with this endeavor. A warehouse described as being located immediately left of [redacted] serves as a logistical support base for this operation.
